Projects

NHL- Fantasy League

A web-application imitating National Hockey League fantasy game. The application uses real-time data from the web to calculate points for the players involved in the league. It uses various design patterns and architectural designs.

Vertex Cover

The project involves the installation of traffic camera at the intersection of street in Waterloo. It involves python, c++ and advanced Linux programming. The NP complete vertex cover problem was reduced by CNF sat.

The University Nexus

The website targets the university students to connect. The students can connect based on program, courses and school. They can chat among themselves and the live location feature allows them to meet.

Ship Reservation System

The CRUD application that allows users to book and pay for the tickets and allows admin to add, update and delete the ship schedules.
